MOTION

August 5, 2015

We MOVE that the Administration provide a report studying the condition of lighting on residential streets throughout the City, including how a fixtures age affects the surface area output, whether fixtures are beyond their expected lifetime use, etc.

We FURTHER MOVE that the Administration provide options including the feasibility and costs of upgrading lights on residential streets to LED fixtures for the purpose of increasing visibility and safety for all residents. These options can include performance contracting, multi-year upgrades, Public-Private Partnership options and a City capital funded model.

Councilmember Chris Seelbach
